SEASON 6 - ROUND SIX - 50 points

Given a sting $\mathbf{S}$ of length $\mathbf{N}$, comprised entirely from ' $\mathbf{0}$ '-s and ' 1 '-s, and two numbers $\mathbf{L}$ and $\mathbf{K}$, your task is to find out if every substring of $\mathbf{S}$ with length $\mathbf{L}$ contains at least $\mathbf{K}$ ' 0 '-s.

Note: A substring of $S$ with length $L$ is a string containing the elements from $S[i]$ to $S[i+L-1]$ inclusive (for some nonnegative integer $\mathbf{i} \leq \mathbf{N}-\mathbf{L}$ ).

```
Input
The first line of the file substring. in contains the integer \(\mathbf{N}\).
The next line contains the string \(\mathbf{S}\).
The final row contains the integers \(\mathbf{L}\) and \(\mathbf{K}\), separated by a single space.
```

## Output

In the output file substring. out print "Yes" if every continuous substring of $\mathbf{S}$ with length L contains at least K ' 0 '-s and "No" otherwise.

## Constraints

$1 \leq N \leq 10^{6}$
$1 \leq K \leq L \leq N$

Time limit: 0.5 sec
Memory limit: $\mathbf{2 5 6}$ MB

## Example test

| Input (substring.in) | Output (substring.out) |
| :--- | :--- |
| 01000011101111 | No |
| 73 | Yes |
| 00000010100010 |  |
| 42 |  |

## Clarifications

Example 1: In the substring S[6-12] ("1110111"), for example, there is only a single ' 0 '.

Example 2: Every substring of length $L$ contains at least two ' 0 '-s.
